IN THE CLAIMS:

Please amend claims 13 and 32 as shown below:

13. A computer data signal ~~embodied in a carrier wave and representing sequences of instructions embodied on a non-transitory computer-readable medium and representing sequences of instructions~~ which, when executed by one or more processors, provide communication protocol layer independent security for data transmitted between a first process, executing on a first network node, and a second process, executing on a second network node, according to at least one common communication protocol layer supported by the first and second network nodes, by performing the steps of:

establishing a Java secure ~~communication~~ channel between the first network node and the second network node;

establishing a ~~first~~ first Java stream between the first process and the Java secure ~~communication~~ channel;

establishing a second Java stream between the second process and the Java secure ~~communication~~ channel;

in response to the data being written to the first Java stream, encrypting the data to generate encrypted data, the encrypting of the data being performed independent of any communication protocol layers used to transport the encrypted data from the first network node to the second network node;

causing the encrypted data to be transmitted from the first network node to the second network node according to the at least one communication protocol layer supported by the first and second network nodes; and

in response to the encrypted data being read from the second Java stream, decrypting the encrypted data to recover decrypted data which is identical to the data on the first network node before the data was written to the first Java stream, the decrypting of the encrypted data being performed independent of any communication protocol layers used to transport the encrypted data from the first network node to the second network node.

32. A computer data signal ~~embodied in a carrier wave and representing sequences of instructions embodied in a non-transitory computer-readable medium and representing sequences of instructions~~ which, when executed by one or more processors, provide communication protocol independent security for data transmitted between a first node and second node, by performing the steps of:

establishing a Java secure communication channel between a first network node and a second network node;

establishing a first Java stream from a first process to the Java secure communication channel after the establishment of the Java secure communication channel, wherein the first Java stream is encrypted after the first process and before entering the Java secure communication channel and the encrypted first Java stream is independent of any communication protocol layers; and

establishing a second Java stream from the Java secure communication channel to a second process after the establishment of the Java secure communication channel, wherein the second Java stream is decrypted after the Java secure communication channel and before entering the second process.
